Abstract

Life on Earth came into being a 4,5 thousand millions of years ago. Human race make his appearance into history and creation stage 80.000 years ago. Only in 200 years of industrialization man succeeded in jeopardizing the planet life. And this for the reason that the economy and industrial period recklessly abused by the nature, in order to grow the benefit, treating it like an ordinary resource. Only in the last hundred years the world population increased threefold, world economy increasing 20 folds, consumption of oil fuel of 30 folds and industrial production of 50 folds.

At the beginning of this millennium human society is confronted with global problems increasing such as: population growth, lack of food, pollution, climate changes, resources depletion, economic inconstancy, extinction of species, illiteracy, political and social inconstancy, inadequate medical system, the risk of a nuclear war, increasing of criminality [1]. This work point out the efforts makes by nations, legal framework for global action in order to preserve resources and environment and to improve the life quality.
