Abstract

The specialized enterprise conceives and manufactures the fixture starting from a contract based on the specifications. The process of making a specification requires new knowledge for the persons involved in this process, but also for the ones who have to design and manufacture the production tools, starting from functional specifications. The functional analysis offers support for accomplishing functional specifications and for conceiving and manufacturing the fixtures starting from the fixtures functional specifications. This article presents the way to establish a fixture's functions using the product's functional analysis.
